IN THE WINTER 2019 AND SPRING 2020, OUR RESEARCH TEAM MET 32 TEENAGERS CONCEIVED BY SPERM DONATION, IN ONTARIO AND QUEBEC, TO KNOW MORE ABOUT HOW THEY MAKE SENSE OF THEIR MODE OF CONCEPTION AND THEIR FAMILY.

WE ASKED THEM HOW THEY DEFINE THEIR FAMILY.

EVERY FAMILY IS DIFFERENT, WHETHER OR NOT THEY WERE DONOR-CONCEIVED.

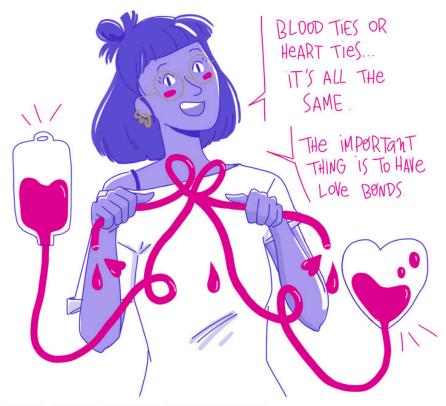

MOST TEENAGERS DON'T SEE THEIR FAMILY AS BEING DIFFERENT FROM OTHER FAMILIES.

FOR SOME, THEIR FAMILY STANDS OUT BECAUSE THEY HAVE TWO MOMS, A SINGLE MOM OR BECAUSE THEY ARE AN ONLY CHILD.

FOR OTHER, WHAT MAKES THEIR FAMILY DIFFERENT HAS NOTHING TO DO NEITHER WITH THE WAY THEY WERE CONCEIVED, NOR WITH THEIR FAMILY TYPE, BUT WITH CERTAIN CHARACTERISTICS UNIQUE TO THEIR FAMILY... LIKE HAVING A HOUSE FULL OF CATS!

BUT FOR EVERYONE, BIOLOGICAL TIES ARE NOT MORE IMPORTANT THAN EMOTIONAL TIES.
